Instructions to set up Subversion server

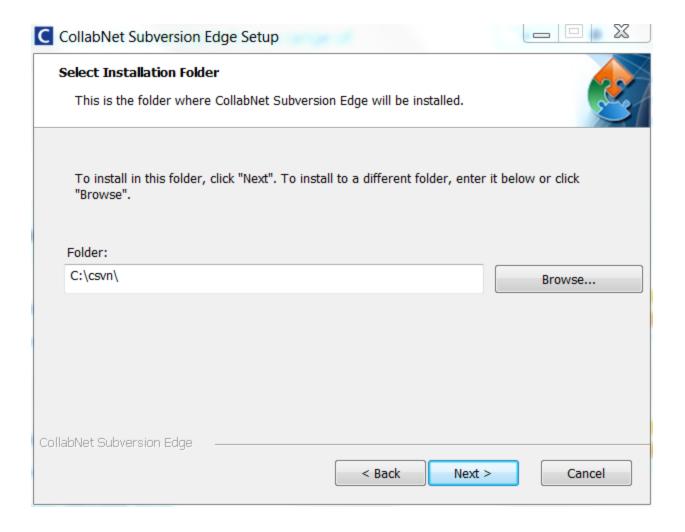

Axel Reichwein

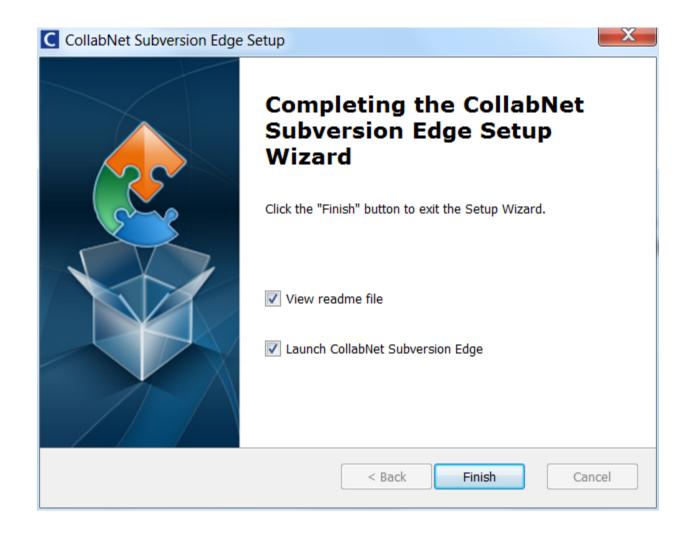

January 28, 2016

Subversion server with HTTPS support

- Install Collabnet Subversion Edge
- https://www.collab.net/downloads/subversion
 n

Installation Folder

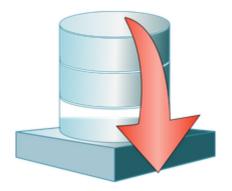

Console Status: Waiting for console to complete startup...

Welcome to CollabNet Subversion Edge. The link

When first installed, Subversion Edge can be man

User name: admin Password: admin

Edit your password by clicking the username link t

Thank you for installing CollabNet Subversion Edg

Launching Collabnet SVN server

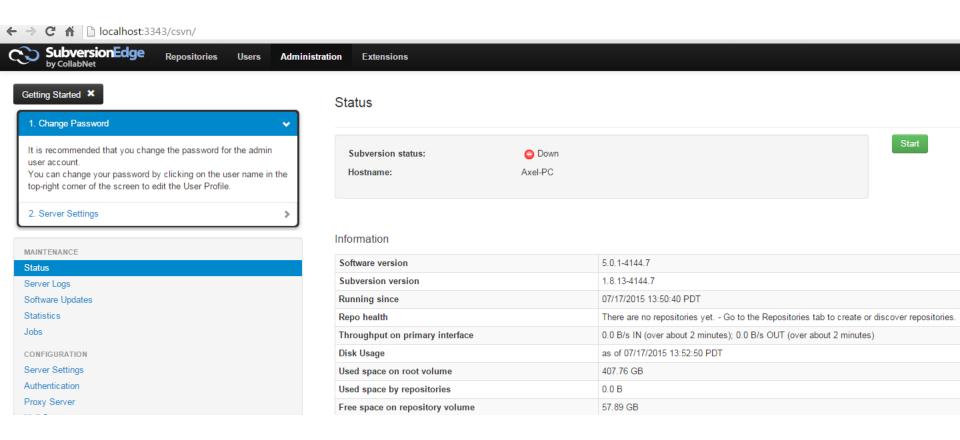

- After a computer restart, you may have to manually go into the csvn installation folder and open launch.html
- If launch.html does not launch the Collabnet server, start manually the CollabNet Subversion Edge and CollabNet Subversion Server Windows Services
- CollabNet Subversion Edge a Java-based web application that provides a browser UI for configuring and managing your Apache Subversion server.
- CollabNet Subversion Server the actual Apache Subversion server that the management console manages for you, and that your Subversion users will access.

Create repository

- Create a repository through the csvn app at localhost:3344/csvn
- Or alternatively
- Choose a repository location within the root Subversion folder (C:\csvn\data\repositories)
- Command: svnadmin create
 C:\csvn\data\repositories\simulinkmodelsrepo

C:\Program Files (x86)\CollabNet\Subversion Server)sunadmin create C:\csun\data\ renositories\mureno

Start server

Add files to repository

- Put files first in a directory, for example named mydata
- Command: svn import simulinkmodels
 http://axel-pc/svn/simulinkmodelsrepo/

```
C:\Users\Axel\Desktop>svn import mydata https://koneksys1:18080/svn/myrepo
Log message unchanged or not specified
(a>bort, (c>ontinue, (e>dit:
c
Authentication realm: <https://koneksys1:18080> CollabNet Subversion Repository
Password for 'Axel': ****
```

Problem

```
C:\Users\Axel\Desktop>svn import simulinkmodels http://axel-pc/svn/simulinkmodel
srepo/
svn: E205007: Could not use external editor to fetch log message; consider setti
ng the $SUN_EDITOR environment variable or using the --message (-m) or --file (-
F) options
svn: E205007: None of the environment variables SUN_EDITOR, VISUAL or EDITOR are
set, and no 'editor-cmd' run-time configuration option was found
```

CollabNet Subversion Repository: simulinkmodelsrepo - Revision 0: /

• <u>..</u>

Solution

- Command: set
 SVN_EDITOR=notepad.
 exe
- Editor pops up with message
- Close editor
- Command line requests input

```
Datei Bearbeiten Format Ansicht ?

--This line, and those below, will be ignored--
A simulinkmodels
```

Use admin + admin for username/passwd

```
C:\Users\Axel\Desktop>sun import simulinkmodels http://axel-pc/sun/simulinkmodel
srepo
Log message unchanged or not specified
(a)bort, (c)ontinue, (e)dit:
Authentication realm: <http://axel-pc:80> CollabNet Subversion Repository

Adding (bin) simulinkmodels\TwoDOFRobotDunCon.slx
Adding (bin) simulinkmodels\model1.slx
Adding (bin) simulinkmodels\model11.slx
Adding (bin) simulinkmodels\model11AfterRT.slx
Adding (bin) simulinkmodels\model11AfterRT4.slx
Adding (bin) simulinkmodels\model2.slx
Adding
       (bin) simulinkmodels\model3.slx
Adding (bin) simulinkmodels\model4.slx
Adding
       (bin) simulinkmodels\sldemo_househeat.slx
Adding
              simulinkmodels\test.txt
Committed revision 1.
```

Subersion Repository on the Web

CollabNet Subversion Repository: simulinkmodelsrepo - Revision 1: /

- _
- TwoDOFRobotDynCon.slx
- model1.slx
- model11.slx
- model11AfterRT.slx
- model11AfterRT4.slx
- model2.slx
- model3.slx
- model4.slx
- sldemo_househeat.slx
- test.txt

Possible problem: importing before having created a repository

```
C:\Users\Axel\Desktop>sun import x2 http://axel-pc/sun/x2

Log message unchanged or not specified
(a)bort, (c)ontinue, (e)dit:
c
sun: E175002: Unable to connect to a repository at URL 'http://axel-pc/sun/x2'
sun: E175002: Unexpected HTTP status 500 'Internal Server Error' on '/sun/x2'

sun: E720003: Additional errors:
sun: E720003: Could not open the requested SUN filesystem
```

Subversion client using proxy server

- By default SVNKit uses proxy settings from the servers configuratio n file that is located in the default SVN runtime configuration area.
- On Windows 7, edit file C:\Users\<UserName>\ AppData\Roaming\Sub version\servers

```
### Information for the first group:
# [group1]
# http-proxy-host = proxy1.some-domain-name.com
# http-proxy-port = 80
# http-proxy-username = blah
# http-proxy-password = doubleblah
# http-timeout = 60
# neon-debug-mask = 130
```

Proxy Server Settings

Global section

```
### You can set default parameters in the 'global' section.

### These parameters apply if no corresponding parameter is set in

### a specifically matched group as shown above. Thus, if you go

### through the same proxy server to reach every site on the

### Internet, you probably just want to put that server's

### information in the 'global' section and not bother with

### 'groups' or any other sections.
```

```
[global]
http-proxy-host = ip.add.re.ss
http-proxy-port = 3128
```
